Kazi Office Bazar, Shyamoli, Dhaka

**Dear Hiring Team,**

I'm excited to apply for the QA Software Engineer position at your company. As a QA Software Engineer, I have developed hands-on experience in both manual and automation testing, and I'm eager to bring my passion for software quality to your team.

In my time at Nybsys Inc., I gained valuable experience working closely with developers to identify and resolve issues, ensuring software performs at its best. I also contributed to the Drinkwell Project using Selenium for functional testing and played a key role in the development of the BIGBAAZAR e-commerce platform, giving me a strong understanding of front-end and back-end technologies.

I'm proficient in Selenium, Postman, JMeter, API testing, and managing databases with MySQL and MongoDB. Additionally, I have a good foundation in Python, React, and FastAPI. I'm confident that my dedication to quality assurance and problem-solving skills will make me a great asset to your team. I'd love to discuss how I can contribute to your company's goals and make an impact.

Thank you for considering my application. I look forward to the opportunity to chat more about how I can support your team.

Sincerely,
